                                                              The present invention relates to seven members of the ADAMS (proteins which contain A Disintegrin And Metalloprotease domain) protein family. The ADAMS proteins and DNA may be used to treat disease, as a food additive or preservative, for chromosome identification, as probes for disponsing a disorder related to the female reproductive system, particularly breast and/or ovary cancer. They are also useful in the gene therapy of breast and ovarian cancer.

SM (HUMA-) HUMAN GENOME SCI

Ruben Rosen CA, Barash SC,

WPI; 2001-451925/48. P-PSDB; AAE09713.

Isolated polypeptide for treating, preventing and/or prognosing medical disorders and also for testing and detection e.g. diagnosis screening for agonists  $^{\circ}$ 

Claim 1; SEQ ID No 34; 469pp; English.

to novel human protein AAD16750-AAD16775 represent cDNAs corresponding

```
genes, and AAE09690-AAE09715 represent the proteins they encode. AAD16777

-AAD16780 represent novel human genomic DNA fragments. The novel proteins and their DNAs are useful for diagnosing, treating, preventing and/or prognosing inflammatory disorders (bursitis or tendonitis); neural disorders (e.g. Parkinson's disease, Albalemer's disease); immune system disorders; AIDS; autoimmune disease (e.g., rheumatoid arthitis); muscular disorders; reproductive disorders; gastrointestinal disorders; cardiovascular disorders (mylosease); pulmonary disorders; cardiovascular disorders (mylosease); pulmonary disorders; cardiovascular disorders (mylosease); hyperproliferative disorders (somerulonephritis, nephrotic syndrome); cancerous disease and conditions (breast cancer); hyperproliferative disorders (leukaemia, hyperplasia); tumours; foetal and developmental abnormalities; haematopoletic disorders; respiratory disorders (thinitis, asthma); angiogenic disorders; disbetes; atherosclerosis; endocrine disorders; the novel protein con the langement of sorders; dispersed disorders and infections. The novel protein con the langement of sorders and anti-sense therapy. The proteins can

AAD16750-AAD16775 represent cDNAs corresponding to novel human protein
genes, and AAE09690-AAE09715 represent the proteins they encode. AAD16777
-AAD16780 represent novel human genomic DNA fragments. The novel proteins
and their DNAs are useful for diagnosing, treating, preventing and/or
prognosing inflammatory disorders (bursitis or tendonitis); neural
disorders (e.g. Parkinson's disease, Alzheimer's disease); immune system
disorders; AID5; autoimmune diseases (e.g., rheumatoid arthritis);
miscular disorders (productive disorders); gastrointestinal disorders
(malabsorption syndrome, Crohn's disease); pulmonary disorders;
cardiovascular disorders (mycoardial infarction, ischaemia, arrhythmias);
renal disorders (glomerulonephritis, nephrotic syndrome); cancerous
disease and conditions (breast cancer); hyperproliferative disorders
cleukaemia, hyperplasia); tumnours; foetal and developmental
cathma); angiogenic disorders; diabetes; atherosclerosis; endocrine
disorders; pregnancy-related disorders and infections. The novel protein
cathma; angiogenic disorders; and infections. The proteins
cathma; angiogenic disorders and infections. The proteins
cathwas a useful in gene therapy and anti-sense therapy. The proteins can
calso be used to aid wound healing and epithelial cell proliferation,
                                                                                                                                                                                                                                             Isolated polypeptide for treating, preventing and/or prognosing medical disorders and also for testing and detection e.g. diagnosis and screening for agonists ^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2253

The present invention describes primer sets for synthesising 5602

full-length cDNas defined in the specification. Where a primer set
comptises: (a) an oligo-dT primer and an oligonucleotide complementary
to the complementary strand of a polynucleotide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
cligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide which comprises a 3'-end sequence. Where the
cligonucleotide which comprises a 1'-end sequence, where the
oligonucleotide comprises at least 15 nucleotides and the combination of
the 5'-end sequence, 3'-end sequence is selected from those defined in
the specification. The primer sets can be used in antisense therapy and
in gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cONAs. The primers are also useful for the
particularly without any specialised methods. ARH0316 to ARH13628 and
ARH03633 to ARH03742 represent human animo acid sequences; and ARH03632
represent chuman animo acid sequences; and ARH03632
represent chuman animo acid sequences; and ARH03632
represent plagonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Yamamoto J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isogai T, Nishikawa T, Hayashi K, Saito K, Ya

AAXE AAH99166 to AAH99904 encode the human proteins given in AAAE5255 to
AAAE5963. The proteins can have activities based on the tissues and
cells they are expressed in, such as: antiinflammatory; antinheumatic,
antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
cardiovascular; antianaemic; antiangeregant; haemostatic; vulnerary;
antiulcer; osteopathic; dermatological; antiallergic; vulnerary;
antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
confidional; antidepressive did polyuncleotides are useful for screening for production. The proteins and polyuncleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, heamatopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, canaemia, platelet disorders, thrombocytopaenia, anaemia, platelet disorders, cancer, multiple sclerosis, depression, albinimer's disease, parkinson's disease, neurodegenerative and neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1610

The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polynucleotide (II) encoding (I). (I) may be used to screen for substances (S) that may modulate its activity. Administering screen for substances (S) that may modulate its activity. Administering (S) (Which modulates protease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoietic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g., central or peripheral nervous system diseases, migraine, pain, sexual dysfunction, mood disorders, attention disorders, neurological disorders, hypotension, hypertension, psychotic disorders, neurological disorders, also be useful as a diagnostic tool for a disease or disorder such as those above. AAS97155-AAS97155 represent human protease coding sequences and primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   vasotropic; antimigraine; antimigration, transplants, hypertensive; hypotensive; neuroleptic; neuroprotective; anabolic; antimifalmmatory; aspartly protease; oysteine protease; metalloprotease; serine protease; cancer; haematopoietic; breast; colon; lung; prostrate; cervical; brain; ovarian; bladder; kidney; pain; immune-related disease; cardiovascular disease; neuronal disease; migraine; sexual dysfunction; mood disorder; attention disorder; cognition disorder; hypotension; hypotension; psychotic disorder; disparential disorder; inflammatory disorder; se.

The invention relates to an isolated, enriched, or purified protease polypeptide (I) and polynucleotide (II) encoding (I). (I) may be used to screen for substances (S) that may modulate its activity. Administering screen for substances (S) that may modulate its activity. Administering screen for substances activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoletic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), immunerelated diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases are even; central or peripheral nervous system diseases, migrafine, pain, sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypotension, hypertension, psychotic disorders, neurological disorders and dyskinesias), metabolic disorders and inflammatory disorders and such as those above. AAS97159-AAS97155 represent human protease coding sequences and primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cactgaaaaggtccaggatgggacctgtgtcagcctggagccctgacatctgtgtggc 1358

Novel metalloprotease containing a thrombospondin domain (MPTS protein) is useful to treat aggreean associated disease including rheumatoid arthritis and osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel metalloprotease containing a thrombospondin domain (MPTS protein) which is useful to treat aggrecan associated disease including rheumatoid arthritis and osteoarthritis. The products of the invention have osteopathic, antiarthritic, antisporiatic and antirheumatic activity. MPTS may be used to identify modulator of its activity, e.g., an agonist or antagonists. Such compounds, as well as MPTS itself may be used to treat disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                      (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell. elucidates in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1297
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1477

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1000 or more and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention useful in developmental biology and in elucidating cell sipsalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is an alternative version of a cDNA encoding 27875 protein, a human ADAM-TS (a disintegrin and metalloproteinase). Metalloproteinase is a proteolytic enzyme involved in protein maturation, protein degradation, tumour growth, metastasis and anglogenesis. Nucleotides encoding 27875, 27875 protein and its antibodies are useful for preventing, disgnossing and treating 27875 metalloproteinase-related disorders. These disorders include, disorders involving the lung such as congenital anomalies,

The protease-related protein shares structural similarity with animal protease-related protein is bares structural such as ADNA-TS6. The protease-related protein is used in therapeutic, datapostic and pharmacogenic applications. It is also used for the expressed protease-related protein, or inappropriately expressed for drug screening which is effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of protease-related protein in the body. It is also used in conjunction with polymerase chain reaction to screen libraries, isolate colones, and prepare cloning and sequencing templates. It is also used as hybridization probe for screening libraries, and assessing gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated human protease polynucleotide that shares structural similarity with animal proteases such as ADAM-TS6, a zinc metalloproteinase, useful in therapeutic, diagnostic and pharmacogenic

                                                                                                                                                                  The present cDNA sequence encodes a novel human protein (NHP), protease-related protein. The protease-related protein shares structural similarity with animal proteases and particularly with metalloproteinases such as ADNA-TS6. The proteases and particularly with metalloproteinases such as ADNA-TS6. The protease-related protein is used in therapeutic, diagnostic and pharmacogenic applications. It is also used for the expressed protease-related protein, or inappropriately expressed protease-related proteins for the diagnosis of a disease. It is also used for drug screening which is effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of protease-related protein in the body. It is also used in conjunction with polymerase chain reaction to screen libraries, isolate clones, and prepare cloning and sequencing templates. It is also used as hybridization probe for screening libraries, and assessing gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ccccgtggcttccgcttctatgtccgtcacactgaaaaggtccaggatgggaccctgtgt 1329

Novel metalloprotease containing a thrombospondin domain (MPTS protein) is useful to treat aggreean associated disease including rheumatoid arthritis and osteoarthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel metalloprotease containing a thrombospondin domain (MPTS protein) which is useful to treat aggreean associated disease including rheumatoid arthritis and osteoarthritis. The products of the invention have osteopathic, antiarthritic, antipsorlatic and antirheumatic activity. MPTS may be used to identify modulator of its activity, e.g., an agonist or antagonists. Such compounds, as well as MPTS itself may be used to treat disease associated with MPTS activity or aggreean degradation, particularly osteoarthritis, rheumatoid arthritis, psortasis, spondylitis, sport injury, joint trauma or fibrosis. This sequence encodes the human MPTS-15 metalloprotease described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1090 tgttctgggggagagtgaacagctaagagcctgcagccaagcgccctgccccccgagcag 1149

chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr.  
RP11-54A4 is from the library RPC1-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/Dacpac/home.htm  
VBC1OR: PBAGe3.6  
IMPORTANT: This sequence is not the entire insert of clone RR11-54A4 it may be shorter because we sequence overlapping sections only once, except for a short overlap.  
The true left end of clone RP11-54A4 is at 1 in this sequence.  
The true left end of clone RP11-353122 is at 174551 in this sequence.  
The true left end of clone RP11-353122 is at 174551 in this sequence.  
The true left end of clone RP11-353122 is at 174551 in this sequence.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequences value corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality)=

30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, SWISSEPOT; Tr:, TREMBL; WP: WORWPEP: Information on the WORWPEP database can be found at the bacterial clone contigs of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRI 30-JAN-2002

                                                             NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Contact: sequence_submissions@genome.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Center: Whitehead Institute/ MIT Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Contact: sequence_submissions@genome.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       * NOTE: This is a 'working draft' sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Center Clone name: 122_18
